

# mongoDB

## COMANDOS Y HERRAMIENTAS ADICIONALES

Enrique Barra

# COMANDOS

# EXPLAIN

- Para ver qué está haciendo la BBDD con la query. Si está usando un índice o recorriendo la colección completa
- No devuelve los datos sólo explica qué haría
- `db.records.explain().find({ student_id: 134 }).sort({ class: -1 })`
- Verbosidad. 3 niveles.
  - **queryplanner**: es el por defecto. Muestra el plan para ejecutar la query
  - **executionStats**: muestra el plan para ejecutar la query y las estadísticas de ejecución de ese plan
  - **allPlansExecution**: muestra el plan ganador y todos los planes de ejecución que se han rechazado (con índice, sin índice, ...)
- `db.records.explain("executionStats").find({ student_id: 134 })`
- `db.records.explain("allPlansExecution").find({ student_id: 134 })`

```
> db.zips.find({pop: {$gt:10000}}).explain()

# OTROS COMANDOS Y UTILIDADES

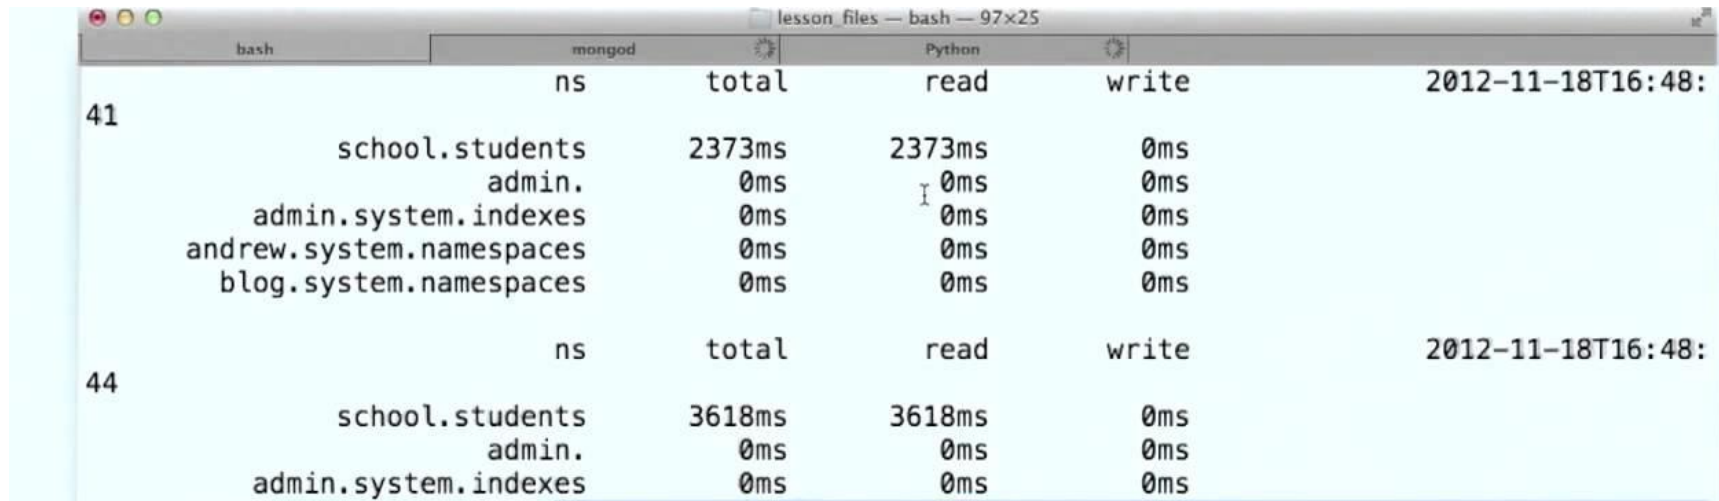

## ○ Profiling.

- <https://docs.mongodb.org/manual/tutorial/manage-the-database-profiler/>
  - Para analizar el rendimiento de las queries y logear queries lentas.
  - Mongo escribirá la salida del profiler a la colección `system.profile`
- 
- Ver el estado del profiling:
    - `db.getProfilingStatus()`
  - Fijar el profiling:
    - `db.setProfilingLevel(level, slowms)`
  - **Level (integer)**: 0 para Off, 1 para log de slow queries, 2 para log de todas las queries
  - **Slowms (integer)**: milisegundos que debe tardar una query al menos para ser considerada lenta
- 
- Para hacer análisis, se puede llamar al profiler directamente:
    - `db.system.profile.find( { millis : { $gt : 100 } } )`
    - Devuelve las operaciones que tardaron más de 100ms

# OTROS COMANDOS Y UTILIDADES

## ○ **Mongotop:**

- Método para imprimir la cantidad de tiempo que MongoDB pasa leyendo y escribiendo datos. Estadísticas son por colección.
- `mongotop 3 #cada 3 segs`
- <https://docs.mongodb.org/manual/reference/program/mongotop/>

# BACKUP Y RESTORE DE LOS DATOS

- Comandos **mongodump** y **mongorestore** usan BSON
- Comando **mongodump**. Sintaxis:
  - > `mongodump --host HOST_NAME --port PORT_NUMBER`
  - > `mongodump --dbpath DB_PATH --out BACKUP_DIRECTORY`
  - > `mongodump --collection COLLECTION --db DB_NAME`
- Comando **mongorestore**. Sintaxis:
  - `mongorestore --collection COLLECTION --db DB_NAME file.bson`
- Comandos **mongoexport** y **mongoimport** usan JSON (hay tipos de datos de BSON que no se soportan)
- Comando **mongoexport**:
  - `mongoexport --db test --collection traffic --out traffic.json`
- Comando **mongoimport**:
  - `mongoimport --db users --collection contacts --file contacts.json`

# DATA VALUE PYRAMID

- Data Value Pyramid (Libro agile data code 2. p. 86 Figure II.1.)

# MONGODB CLOUD MANAGER

# MONGODB CLOUD MANAGER

- Servicio online que permite gestionar un despliegue de MongoDB
- Es de pago. Te da 30 días de trial gratuitos
- Se pueden hacer despliegues locales, remotos o en el cloud de Amazon o Microsoft (Azure)
- Se pueden gestionar despliegues existentes

# FUNCIONALIDADES

- Monitoriza todos los nodos (mongod, mongos, ...)
- Reportes en tiempo real del estado de la BBDD y el hardware de los nodos
- Alertas
- Backups y restore

# MONGODB ATLAS

29

# MONGODB ATLAS

- <https://www.mongodb.com/cloud/atlas>
- Gestión del cloud de MongoDB con mucha automatización y alertas
- Se diferencia del cloud manager en que nos da ya todo automatizado en el cloud. Es decir no es nuestro cloud sino que está alojado en el de MongoDB INC
- **De pago**

The screenshot displays the MongoDB Atlas web interface. At the top, the header includes the 'mongoDB Atlas' logo, 'All Clusters', a time zone warning, usage information for the current month (\$0.00), and a user profile 'Joe'. The left sidebar contains navigation links for 'CONTEXT' (Project 0), 'PROJECT' (Clusters, Alerts, Backup, Users & Teams, Settings, **Stitch Apps**, Charts, Docs, Support), and 'Build a New Cluster'. The main content area is titled 'Clusters' and shows the 'Overview' tab for 'MongoCluster0' (Version 4.0.4). Key metrics include 'Operations' (R: 0, W: 0, 0.003/s), 'Logical Size' (580.0 B, 512.0 MB max), 'Connections' (0, 100 max), and 'INSTANCE SIZE' (M0 (General)). A 'LINKED STITCH APP' section shows 'Multiple applications linked'. An 'Enhance Your Experience' box with an 'Upgrade' button is also visible.

A decorative graphic on the left side of the slide. It features several vertical stripes in shades of green and grey. Overlaid on these stripes are several green circles of different sizes. One large circle is positioned near the top left, and several smaller circles are arranged in a cluster below it. The text 'MONGODB STITCH' is positioned to the right of these circles.

## Plataforma sin servidor MongoDB Stitch: servicios

### Stitch QueryAnywhere

Permite utilizar el lenguaje de consultas expresivo de MongoDB fuera del entorno local y con seguridad

Entornos iOS, Android, web e IdC

### Funciones de Stitch

Integración de microservicios + lógica del servidor + servicios en la nube

Creación de aplicaciones completas o datos como servicio a través de API personalizadas

### Stitch Triggers

Con las notificaciones en tiempo real, las funciones de las aplicaciones pueden reaccionar en cuanto se producen cambios en las bases de datos.

### Stitch Mobile Sync

Sincronización automática de datos entre documentos almacenados de forma local en MongoDB Mobile y su base datos del backend

Optimiza el desarrollo de aplicaciones facilitando el acceso seguro a los datos y servicios del cliente, lo que evita la escritura de miles de líneas de código y la gestión de infraestructuras. Acelera el lanzamiento de aplicaciones al mercado y reduce los costes operativos.

# MONGODB STITCH - AHORROS

Sin Stitch	Con Stitch
Aprovisionar el servidor de backend	✓ No es necesario
Instalar el entorno de ejecución del backend	✓ No es necesario
Escribir código para la autenticación de usuarios	{Configuración JSON simple}
Escribir código para los controles de acceso de datos	{Configuración JSON simple}
Escribir código sobre cada API de servicio externo	Escribir código sobre un único SDK/API
Realizar un sondeo de la base de datos para detectar cambios	✓ No es necesario
Escribir código para la API REST para que el frontend pueda usar el backend	✓ No es necesario
Añadir código para que el backend tenga alta disponibilidad	✓ No es necesario
Añadir código para escalar el backend	✓ No es necesario
Escribir código para la lógica de aplicaciones del backend	Proporcionar código para las funciones de Stitch
Escribir código para el frontend de aplicaciones	Escribir código para el frontend de aplicaciones mediante un único SDK
Supervisar y gestionar la infraestructura del backend	✓ No es necesario

# MONGODB STITCH

- NPM package
- Functionalities:
  - **Stitch QueryAnywhere:** directly from your web and mobile application frontend code
  - **Stitch Functions:** Allows developers to run simple JavaScript functions
  - **Stitch Triggers:** Real-time notifications that launch functions in response to changes in the database
- Examples:
  - Submit an expense claim to the database, and send a text notification to the approver – all with a single method call from the client application
  - Send a text message or email to notify a customer that their balance has fallen below their threshold

# MONGODB REALM

36

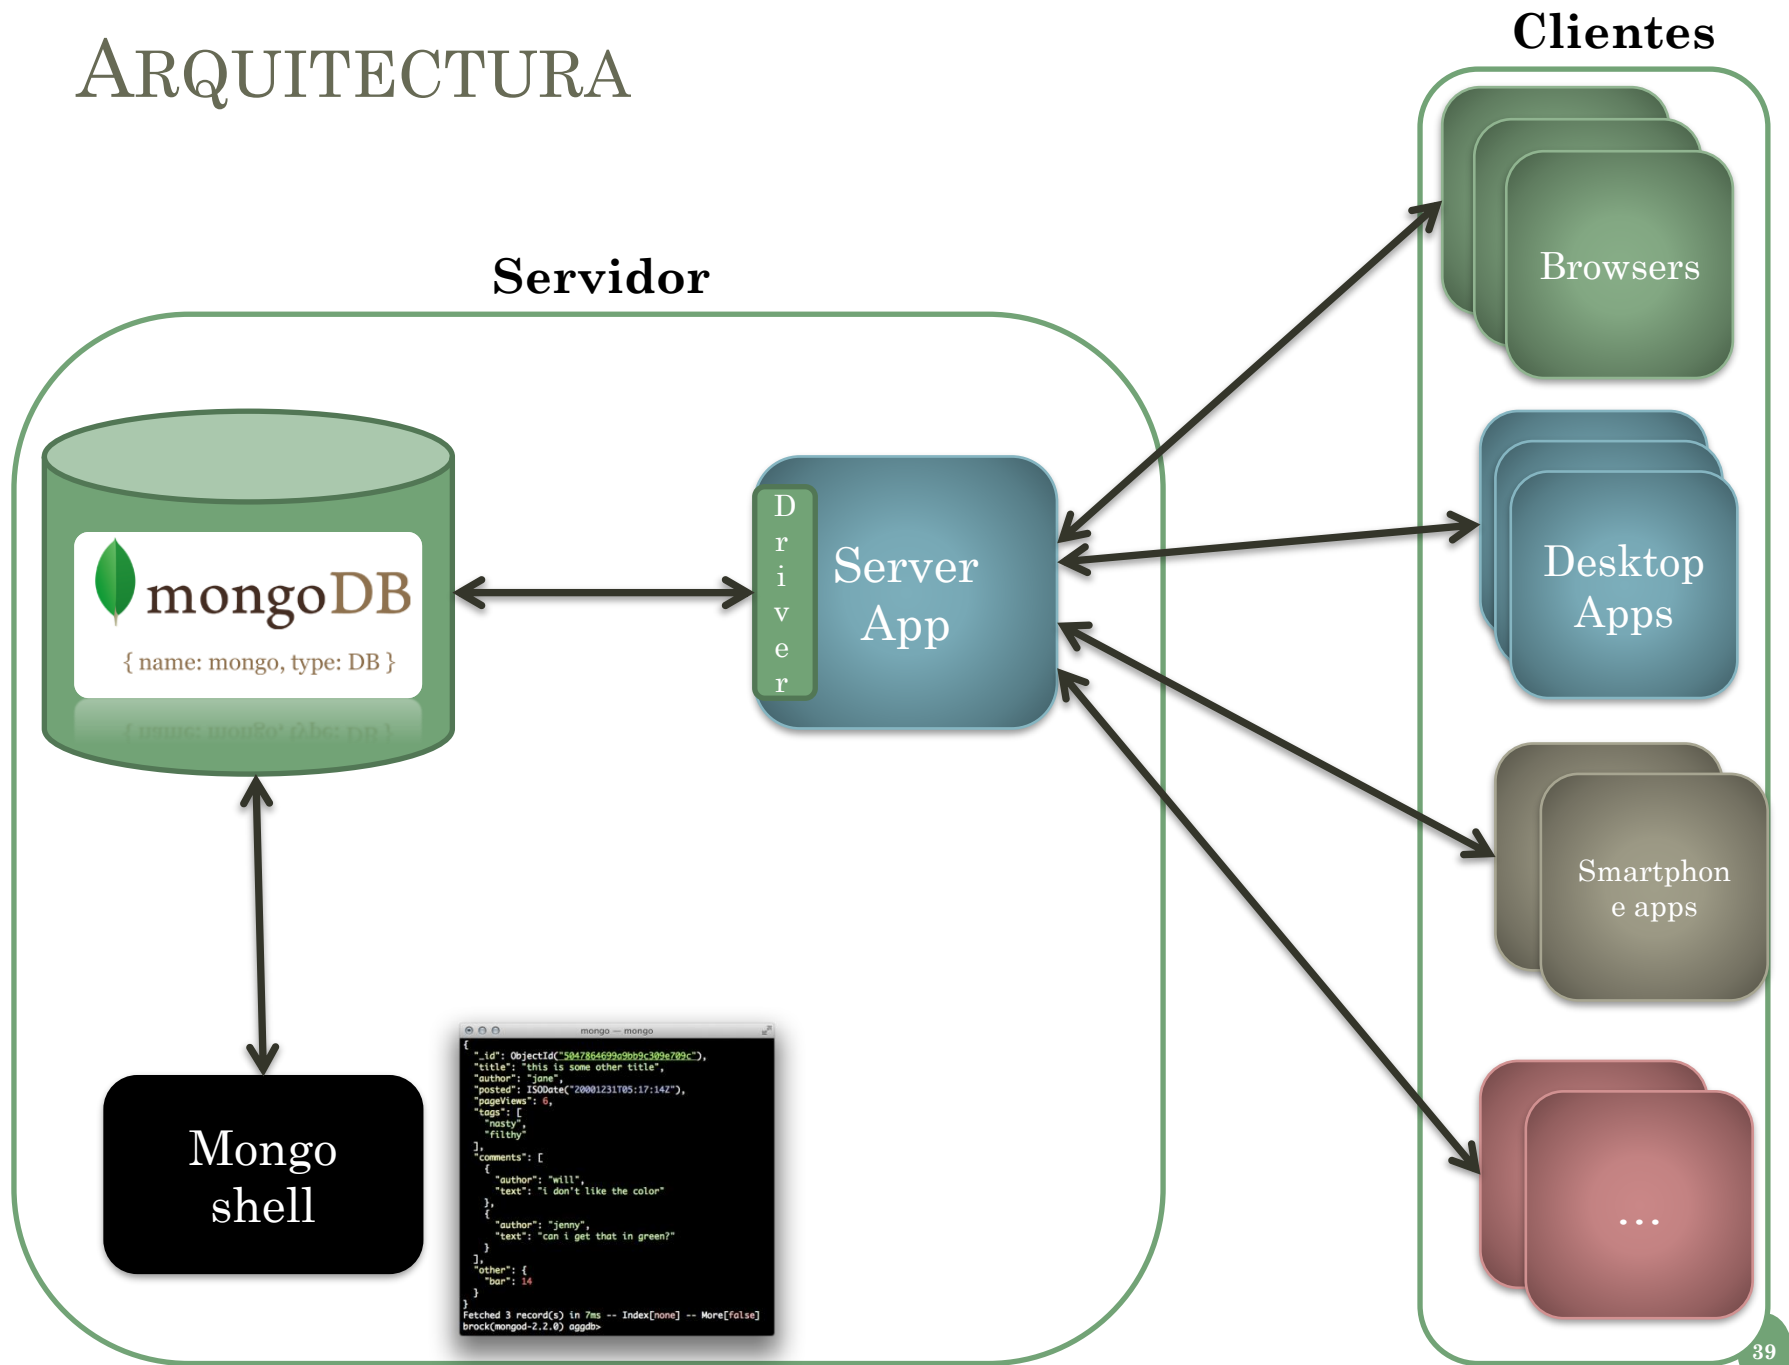

# MONGODB REALM

- MongoDB compró una base de datos open source llamada **Realm** (<https://realm.io/>) orientada a BBDD en móviles
- No es una base de datos documental, sino basada en objetos que soporte multiples tipos de esquemas (entre ellos documentos)
- Noticia:
  - <https://www.mongodb.com/press/mongodb-strengthens-mobile-offerings-with-acquisition-of-realm>
- Presentación:
  - <https://www.youtube.com/watch?v=WEL28rrG3DQ>
